

Minesweeper Midi Gems by Crazy Professor White Paper

COMING SOON

What is the collection size?

Just **344** tokens. For the first time in NFT history, the Minesweeper Midi Gems collection is naturally limited in size.

20%

of the collection goes to the **team**

15%

will be given **free** mint

65%

will go on **sale**

What is the network?

Ethereum.

What is the mint date?

It will be determined later. Join us on [Discord](#) and [Twitter](#) and follow the news!

What is the mint price?

0.25 ETH

Contract Information

We've got the safest and the most reliable smart contract - **ERC721a**. Mint will take place on our website <https://www.crazyprofessor.site> We will take a **2.5%** royalty on NFTs reselling.

What is there after mint?

Apart from owning a pure rarity, the collection holders enjoy the following **privileges**:

Cash raffles, one lot equals 0.25 ETH.

Free access and special discount in Crazy Professor's second project - Largest Primes Store (for more information see "What's next?" section).

Chance to get two tickets to the World Video Game Hall of Fame in Rochester, NY (or their cash equivalent). The travel costs will be covered.

How to get whitelisted?

Join our [Discord](#) and [Twitter](#) and take part in our promos and giveaways.

What's next?

Largest Primes Store

The emergence of the new prime numbers is a very labor-intensive and rare case - the latest largest prime number was discovered in 2018.

Crazy Professor Studios is now working with the largest prime numbers to turn them into ingenious math objects. The number of NFTs made of these objects will also be naturally limited as the number of discovered largest primes.

Largest Primes Store is the shop where the largest primes NFTs will be sold. The larger the prime number is the rarer the NFT is. The shop provides a genuinely unique opportunity for buying the largest primes for yourself! Thanks to its natural rarity, this can be both a gift to someone and an investment.

Who is Crazy Professor?

Being a real scientist, one of the co-founders of the project has become a prototype for **Crazy Professor** who often comes up with offbeat ideas, symmetry experiments, and new approaches.

Team

Crazy Professor Studios is a team of math geeks who love art.

Unlike other NFT projects, we have got our own scientific advisor who is a real scientist with Erdős number equal to 3. This number is a median value for Fields medalists, which is superior to 91% of the world's mathematicians.

We see our mission in dissecting the simple elegance of math and transferring it to the world of contemporary art. New approaches to showing the beauty of numbers and symmetry experiments make our **Minesweeper Midi Gems** and upcoming collections very special.
